

FastBall™ Power Line Marker

FastBall markers snap to the line with two patented SnapFast clamps. Spiral wire preform is not needed.

SnapFast clamp in open position.
(Note that one side of marker is not yet bolted closed to allow “clamshell” installation over power line.)

SnapFast clamp in closed position.
Grip is secure without damaging line.

FastBall power line markers are quick-to-install on power lines up to 100 kV. The marker fits nearly any diameter line and can be stocked by utilities and distributors to meet immediate needs.

- **General purpose power line marker (up to 100 kV)**
- **Quick installation on nearly all diameters of line**
- **Ideally suited to installation from bucket truck**
- **Can be stocked to meet many immediate needs**
- **Available in 20” and 24” diameters**
- **Durable & lightweight K-10 ABS**
- **Color lasts 10–15 times as long as fiberglass (available in international orange, yellow, white)**
- **Firm grip on lines with patented SnapFast™ clamps**

Proven to help pilots avoid collisions with power lines, especially low hanging distribution lines, FastBall markers simply snap into place, then are bolted closed, for quick and easy installation from a bucket truck. (Installation on live lines may be possible. Please inquire.) FastBall markers are also safe to use on OPGW lines.

Instead of attaching to the line with spiral wire preforms that must be sized to the specific line diameter, FastBall markers use two patented SnapFast clamps to securely grip the line without damaging it. SnapFast clamps have been used to attach hundreds of thousands of bird diverters and other kinds of markers from P&R Tech to power lines worldwide.

Because SnapFast clamps allow a nearly universal fit on individual or bundled line diameters up to 2.75” (100 kV max.), FastBall markers can be stocked by utilities and distributors to meet most immediate line marking needs.

Available in 20” and 24” diameters, and international orange, yellow, or white, FastBall markers use the same long-lasting and colorfast ABS material used in our industry standard family of SpanGuard™ power line markers, many of which have been in continuous use since the 1960s.
